Practical 05 — Laboratory Submission Report

Settings in a File, Bugs Caught by a Robot · SCSE3040 MLOps

Session 2026-27

1. Student and Laboratory Session Details

Student Name:	Parth Rawat
Roll Number:	S24CSEU1345
Batch:	CSE (Batch 2024-28)
Laboratory Date:	October 20, 2026
Institution:	Bennett University · School of Computer Science Engineering & Technology

2. Repository Link (Written out in full as text)

https://github.com/Daemon-01/MLOps.git

https://github.com/Daemon-01/MLOps

3. Contents of config.yaml (Pasted as text)

```yaml
# Settings for the delivery-time model.
# Change values here, never in the code.

data:
  path: ../data/delivery_times.csv
  features:
    - distance_km
    - prep_time_min
    - traffic_level
    - rain
  target: delivery_min

split:
  test_size: 0.2
  seed: 42

model:
  name: linear_regression

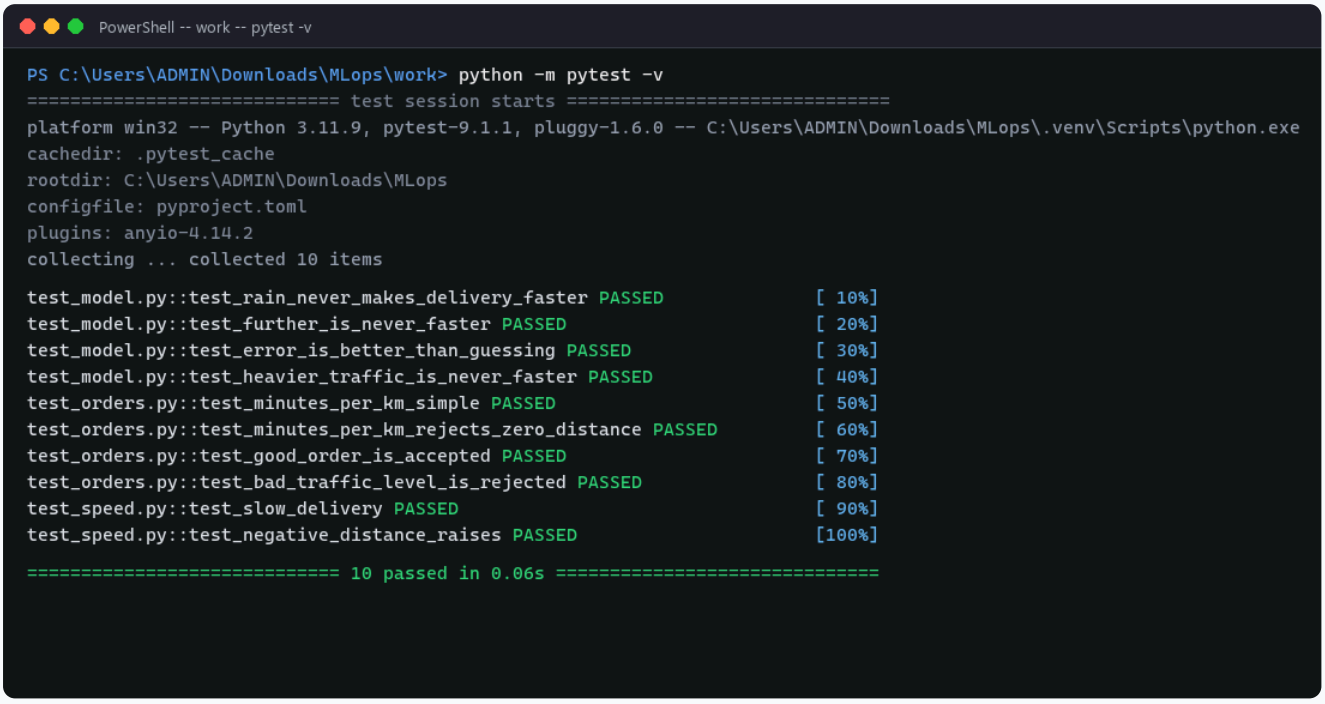

training:
  max_rows: 300
```

Practical 05 — Test Results & Model Verification

Automated Testing with pytest · Refactoring Verification

10 / 10 Tests Passing

4. Screenshot of Terminal after Running pytest (Full Summary Line Visible)

5. Model Output Statement (Before vs. After Refactor)

One-line Statement: Before the refactor, the hardcoded model training produced an MAE of **1.92 minutes**, and after refactoring to use `config.yaml`, the package produces the identical honest MAE of **1.92 minutes** on the complete dataset (and **2.18 minutes** when restricted to the configured 300-row limit in Task T1).
